

HeiSha SDK Version Description

Version No.	Date	Update description
V1.0.0	2021-08-25	Original version
V1.0.6	2021-09-26	1.Bug fixing; 2. Server connection optimized
V1.0.7	2021-10-14	<p>1. added the A/C module component, which can obtain the real time data of A/C module, water sensor and smoke sensor sampling value.</p> <p>2. modified the device login mode, the login information is changed from device name to device serial number.</p>
V1.0.8	2021-11-15	<p>1.The EdgeComputing component replaces the Switch component, retains the old functions of Android, NVIDIA and Remote Control power state feedback and operation, adds sub-components GPSLocator and Hygrothermograph,Their instances can be obtained by the parent component EdgeComputing, and their states, attributes, and data can be obtained by the instance calling the corresponding function.</p>

		2.Fixed bug: Failed to connect to the server because there was no network during the first connection.
V1.1.1	2021-11-23	<ol style="list-style-type: none"> 1. The operation of connecting to the server is completed by the SDK internally, and the connection is completed every 5 seconds until the connection is successful, so as to solve the problem that the network is not connected when the caller connects, resulting in subsequent connection acceptance. 2. New Protocol added. 3. Add receiving message filtering to improve message tolerance.
V1.1.2	2021-11-24	<ol style="list-style-type: none"> 1.Remove the function of setting the air conditioner working mode; 2.Fix BUG of request configuration parameter version information.
V1.1.4	2021-12-01	<ol style="list-style-type: none"> 1.Optimized downward compatibility ; 2. Add remote control module .
V1.1.5	2022-01-22	<ol style="list-style-type: none"> 1.added one-click charging,one-click flight preparation call functions; 2.Added an entity class for reporting things; 3.Added interfaces for data from meteorological

		stations, rain gauges, solar panels; 4.Optimize the unit of data and fix several bugs.
V1.1.6	2022-03-04	1. Modified the Offset of ThingCode.
V1.1.7	2022-05-16	1. Fix the BUG of obtaining the device when the device is not connected; 2. Add an interface for disconnecting; 3. Add a ThingCode "THING_CODE_NOT_Available", indicating that the code is unrecognized;
V1.1.8	2022-06-13	1. Add some control drone interfaces to the RemoteControl module;
V1.1.9	2022-09-09	1. Add an interface to the ControlCenter module to publish native data for drones and remote controls;
V1.1.10	2022-10-13	1. Added an API that controls camera zoom in and out; 2. Added an API that re-pairs rc with drones; 3. Add some APIs that update device firmware;
V1.1.11	2022-11-10	1. added interfaces that get the status and progress of firmware updates;
V1.1.13	2023-03-06	1. Optimized mqtt message processing mechanism; 2. Added an interface to log in to the MQTT server by username and password;
